## Information Security

### Information Security Management System

The standard provides the requirements for an Information Security Management System (ISMS) that will help your company manage the security of company assets such as your client and employee data, intellectual property and financial information.

The ISMS is a systematic approach to managing information security. It includes people, processes and IT systems by applying a risk management process. It can help businesses of all sizes, in any sector to keep their information assets secure.

Our consultants can help you audit and manage an existing Quality Management System or assist you to prepare for certification.

We provide a simple 12 step implementation plan to help you get ready for your certification audit.

Our service includes:

- Liaison with Certification Body
- Full Suite of Implementation Tools
- Comprehensive Document Toolkit
- Internal Audit Training
- Support and Attendance at Management Reviews
- Telephone support
